CRIMEVISIONAI

No. of Functional Features Included in the Solution

Folder 5 | Feature inventory and status | Prepared 23 October 2026

Project: CrimeVisionAI — Multimodal Forensic Evidence Analysis and Investigation Support System

Document status: Project-specific draft based on the implementation information currently available. Verify placeholders and run-dependent results before formal submission.

1. Feature inventory

Feature	Current status	Evidence / qualification
Case management	Implemented at basic level	Case CRUD-style API and seeded case CASE-2026-MVP-001 are reported.
Evidence upload and storage	Implemented at basic level	Evidence upload/media endpoints and case-scoped storage are reported.
Audio analysis	Implemented at basic level	Whisper transcription, timestamps and LLM-assisted event structuring; no speaker diarization.
Image analysis	Implemented at basic level	RT-DETR detections, CLIP scene labels, BLIP caption and cautious LLM interpretation.
Video analysis	Implemented at basic level	Supported formats MP4/MOV/AVI/MKV/WEBM; sampled at 1 FPS, capped at 180 seconds / 180 frames.
Unified case timeline	Implemented at basic level	Timestamped events can be presented/searched as an investigation timeline; fusion quality requires continued validation.
Investigator Q&A	Implemented, known grounding gap	Case chat exists; observed answer-grounding issue can omit detected entities, so do not treat as fully reliable.
PDF report export	Not confirmed complete	A documentation/reporting activity was identified as a remaining gap; verify current repository before claiming availability.
3D visualization	Planned / not confirmed	Do not describe as implemented without repository evidence.
Speaker diarization	Not implemented in known baseline	Audio pipeline has no speaker diarization.
Production authentication / deployment	Not confirmed	Do not claim production-grade authentication or hosted deployment without verification.

2. Status summary

Metric	Count / value	Interpretation
Features listed in this inventory	11	Inventory groups major capabilities and gaps; not a complete code-level issue tracker.
Implemented at basic level	7	Case management, evidence intake, audio/image/video analysis, timeline and Q&A as listed.
Partial / known quality issue	1	Investigator Q&A is implemented but grounding/completeness is imperfect.
Not confirmed / future	3	PDF report export, 3D visualization, speaker diarization; production security is also unverified.
Features tested and verified	Not assigned a global count	Only specific checks have been reported; do not imply comprehensive QA.
Performance benchmark status	Not measured in this document	Requires repeatable load/latency tests with recorded environment.

3. Category breakdown

Category	Features	Examples
User interface	Case dashboard, evidence upload, results, timeline and Q&A views	HTML/CSS/JavaScript/Jinja2; verify each screen in current build.
Backend / logic	Case and evidence routes, analysis orchestration, timeline and chat	Flask app factory and Python logic.
Database / storage	Case/evidence/result records and uploaded media	SQLite and local filesystem.
AI / model integration	Whisper, RT-DETR, CLIP, BLIP, Groq	Model outputs must be checked against known examples.
Security / authentication	Local development controls; production controls unverified	Do not claim full authentication or forensic chain of custody without evidence.

4. Status definitions

Implemented at basic level: code path exists and has been reported as part of the current baseline; re-run acceptance tests before final submission. **Partial:** capability exists but known quality limitations remain. **Not confirmed:** evidence is insufficient to claim it is complete. **Future:** proposed extension not represented as current functionality.
