CRIMEVISIONAI

Demonstration of Proposed Features

Folder 8 | Feature-by-feature demonstration matrix | Prepared 23 October 2026

Project: CrimeVisionAI — Multimodal Forensic Evidence Analysis and Investigation Support System

Document status: Project-specific draft based on the implementation information currently available. Verify placeholders and run-dependent results before formal submission.

1. Demonstration matrix

#	Feature	Status	Demo evidence / notes
1	Case management and evidence organization	Implemented at basic level	Show seed case CASE-2026-MVP-001 or a created case and evidence list; verify latest build.
2	Evidence upload and media retrieval	Implemented at basic level	Upload a small authorized sample; show evidence record and media retrieval.
3	Audio transcription and timestamps	Implemented at basic level	Use a short clear sample; disclose no speaker diarization.
4	Image object detection, scene labels and caption	Implemented at basic level	Show RT-DETR detections, CLIP scene labels and BLIP caption; discuss false positives.
5	Video frame analysis	Implemented at basic level	Show sampled frame outputs at 1 FPS; respect 180-second cap.
6	Timeline / candidate event review	Implemented at basic level	Show timestamped events and source evidence where available.
7	Investigator Q&A	Partial — known grounding gap	Demonstrate cautiously; verify answer against source outputs and disclose omissions issue.
8	PDF report export	Not confirmed	Do not demonstrate or claim until verified in current repository.
9	3D visualization	Planned / not confirmed	Describe only as future exploration if needed.
10	Speaker diarization	Not implemented in known baseline	State limitation; do not imply speaker attribution.

2. Summary

Core workflow capabilities are reported as implemented at a basic level, but this is not equivalent to passing a complete acceptance test. A final demonstration should record the exact build/commit, sample input files, observed outcomes and any failures. The number of features actually demonstrated should be filled after rehearsal rather than inferred from implementation status.

3. Recommended evidence capture

Capture screenshots of case/evidence selection, one image analysis, one audio transcript, one video frame/timestamp, the timeline, and a Q&A; answer alongside the supporting analysis. Use synthetic or authorized media. Avoid screenshots containing API keys, sensitive evidence or personal data.
