# CRIMEVISIONAI

## Project Demo Planning

Folder 8 | Recommended 9-minute demo script | Prepared 23 October 2026

**Project:** CrimeVisionAI — Multimodal Forensic Evidence Analysis and Investigation Support System

**Document status:** Project-specific draft based on the implementation information currently available. Verify placeholders and run-dependent results before formal submission.

## 1. Demo schedule

| # | Section | Description | Duration | Presenter |
|---|---|---|---|---|
| 1 | Introduction | Problem, goal and explicit statement that this is decision support, not an autonomous forensic authority. | 1 min | [Assign presenter] |
| 2 | Architecture and case setup | Show case workspace, evidence organization and concise architecture. | 1 min | [Assign presenter] |
| 3 | Image analysis | Upload prepared synthetic image; inspect detections, scene labels and caption. | 1.5 min | [Assign presenter] |
| 4 | Audio analysis | Run short clear audio; show transcript and timestamps. | 1.5 min | [Assign presenter] |
| 5 | Video and timeline | Show sampled frames and candidate timeline events; explain 1 FPS limitation. | 2 min | [Assign presenter] |
| 6 | Investigator Q&A | Ask a known-answer question and compare response to evidence outputs. | 1 min | [Assign presenter] |
| 7 | Limitations and future work | Explain grounding issue, missing diarization, testing gaps and roadmap. | 1 min | [Assign presenter] |

## 2. Pre-demo checklist

■ Start app from the intended repository commit. ■ Confirm local database and upload directories are available. ■ Confirm required environment variables are set without exposing secrets. ■ Warm/download models before the presentation. ■ Prepare short synthetic evidence files and expected observations. ■ Test the exact click path and API behavior once before the session. ■ Prepare screenshots/video fallback for slow inference or API outage. ■ Ensure debug server is not publicly exposed. ■ Assign actual presenter names and verify each section.

## 3. Demo flow notes

Start with the investigator problem and show the complete workflow rather than a long model explanation. For every result, distinguish what the media/model directly outputs from an LLM-generated interpretation. When showing Q&A;, explicitly validate the answer against stored evidence and avoid presenting it as a definitive conclusion. End with measurable next steps rather than unverified claims.

## 4. Presenter notes

Presenter names and team responsibilities were not included in the supplied files. Replace role placeholders with actual names only after confirming the team's real allocation.
